

WEST WATREEE TRANSPORTATION STUDY

Public Drop-in Meeting Kicks Off Multimodal Study

Kershaw County and the Central Midlands Council of Governments are undertaking the West Wateree Transportation Study, a comprehensive transportation and land use analysis that will result in a coordinated set of design solutions that not only respond to the transportation demands of the area but also are sensitive to the desires of those who call West Wateree home. The Study will address cars, bicycles, pedestrians, transit, adjacent land uses, the environment, and urban design.

Other than looking at existing conditions, the project team has not begun to consider solutions for the study area; no decisions have been made. While more public meetings will be held, this initial meeting is fundamental in learning about community expectations. Your input during tonight's meeting will help the project team to determine what should be done. Please let us know what you like and don't like about the study area. This is your opportunity to help us know what is important to you.

Tonight's meeting has two goals:

1. To hear your desires for the West Wateree study area to better understand what is important to you; and
2. To provide information about the purpose and objectives of the West Wateree Transportation Study and educate participants on opportunities presented by the project.

Provide Input Online

All are encouraged to provide additional comments digitally, by accessing the project WikiMap, a web-based interactive mapping platform specifically tailored to the West Wateree study area. The map "crowd-sources" data created by users and provides the project team with further insight on local concerns and desires. Users are able to pinpoint specific locations of interest or areas of concern. Test drive the WikiMap tonight, or access it anywhere you have internet via:

Guiding Principles Summary Meeting

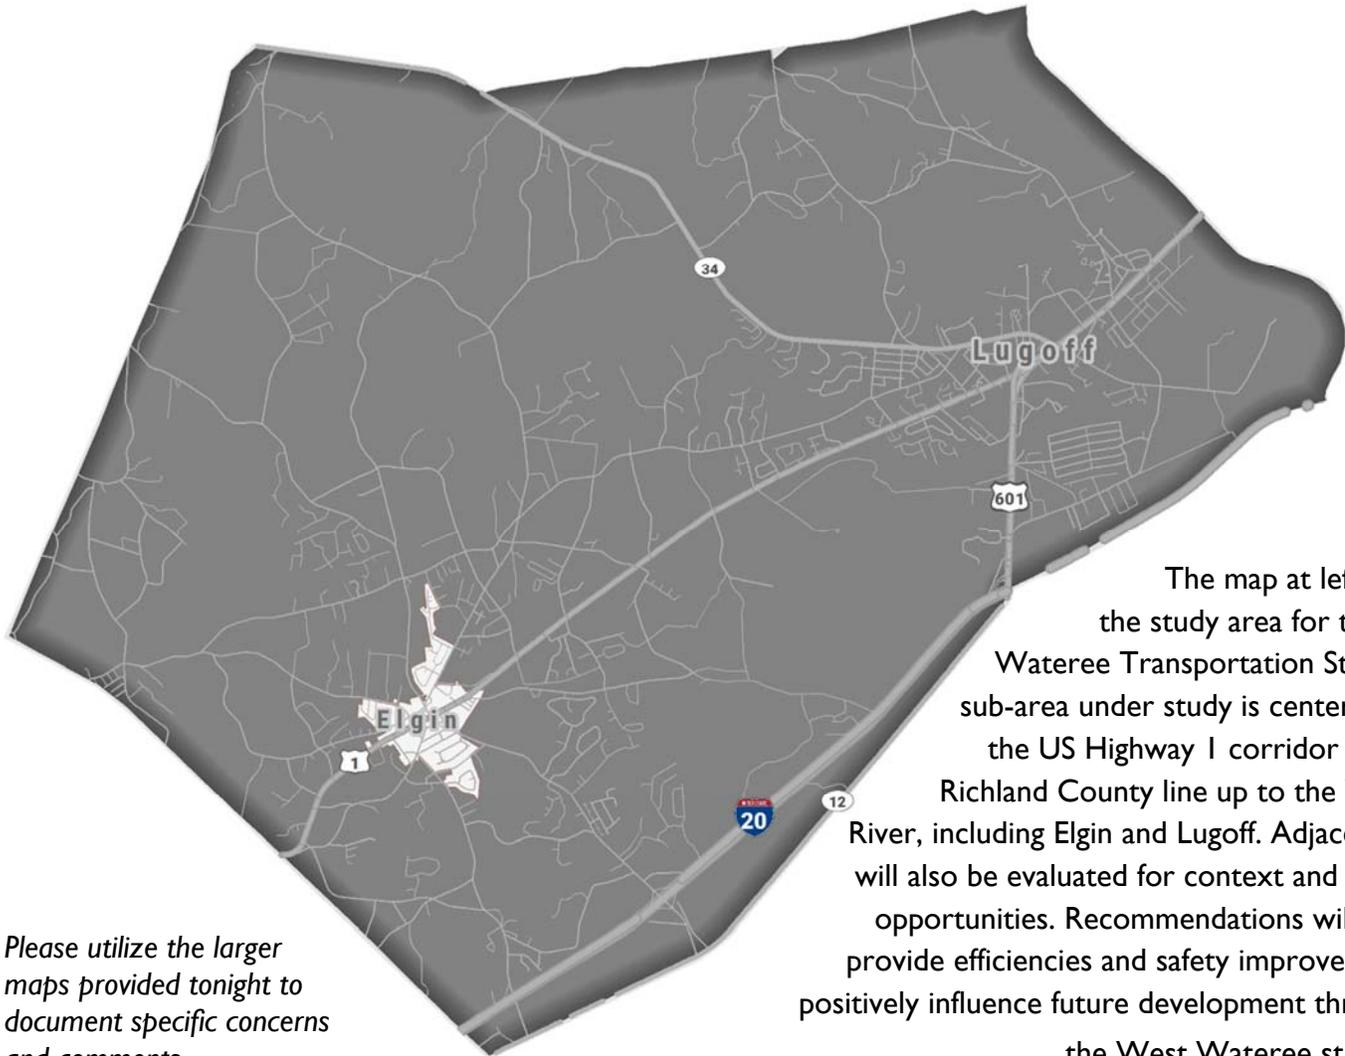

*Recap of tonight's public meeting,
summary of input received, and
presentation of guiding principles.*

***Plan now to attend this
important meeting!***

Thursday, May 19, 2016 at 6:00 PM
Elgin Town Hall
1201 Rose Street
Elgin, SC 29045

Study Area will Provide Context for Initial Analysis

The map at left depicts the study area for the West Waterree Transportation Study. The sub-area under study is centered along the US Highway I corridor from the Richland County line up to the Wateree River, including Elgin and Lugoff. Adjacent areas will also be evaluated for context and potential opportunities. Recommendations will seek to provide efficiencies and safety improvements to positively influence future development throughout the West Waterree study area.

Please utilize the larger maps provided tonight to document specific concerns and comments.

Elements of the Planning Process

- Establish Baseline Existing Conditions
- Analysis & Evaluation
- Needs Assessment
- Recommendations
- Final Study Report

Thank you for your participation!
